

## TRANSPLANTING MADE EASY

The GardenPODS Grid is a nursery bed that keeps plants separated and closer together. You will have higher yields with less prep work, less weeds and less water use. This earth-friendly raised garden grid is perfect for keeping your plants in a confined space prior to transplanting.

### Why GardenPODS?

- Holds up to 53 individual plants in 6" deep pods as they grow and await transplant.
- Pods keep roots from intertwining with other plants root systems, keeping the rootball intact at the transplant stage.
- Durable food-grade HDPE material will ensure years of safe use.
- Deep pods keep plants moist, reduce water frequency.
- Stabilizes your potted plants to avoid tipping of individual pots on windy days.

### Installing GardenPODS is as Easy as 1-2-3.

The GardenPODS grid is a 4 ft. x 8 ft. section that can easily be cut to your preferred size. A wood frame may be added, but not required.
