

SPLASH BLOCKS

DOWNSPOUT FLOW CONTROL

Beautify your home and garden

Control the water flow from your downspouts with the Yardfully™ splash blocks. They spread the rush of runoff from your gutters, moving water out and away from building foundations and limiting concentrated flow that can cause erosion.

Simply place a Yardfully™ splash block at the end of each downspout and let it direct and spread out the rush of water flow.

Yardfully™ splash blocks are perfect for homeowners, developers, landscape and contractor suppliers and municipalities.

Choose the style that's right for you

Two styles and two color options give you choices for blending with your home and building exteriors, lawn and garden landscapes.

What Yardfully™ splash blocks offer

- Broad channel sides to manage heavy flows, directing water to spread away from your foundations.
- Durable, heavy-weight molded plastic that resists temperature extremes and won't crack or decompose.
- UV blockers that will last for years.
- Material that is lighter and tougher than concrete, but heavier than cheaper brands that can blow away in the wind.

SLATE GRAY

An attractive, textured stone finish in gray.

DIAMOND BROWN

A heavier, traditional diamond crisscross style in brown.
