

GEOBIN® Mini Composter

INSTALL IN 4 EASY STEPS:

Composting System

Congratulations and thank you for purchasing the GEOBIN® Mini composting bin. You have chosen the leading compost bin that offers:

- the easiest setup
- the best adjustability: choose the capacity size that's right for you
- the fastest-acting decomposition with the least amount of effort: numerous wall openings on the bin allow passive aeration

Create rich, nourishing compost

You've already made the decision to do the right thing by composting. Composting saves money through reduced leaf bag expense and reduction in fuel costs for hauling leaf and grass clippings.

You'll produce your own compost and use it to grow world-class plants, flowers, and vegetables in your garden. You'll also be doing your part to divert organic matter from landfills, reducing your impact on the environment.

MATERIALS INCLUDED IN KIT:

- (1) GEOBIN® Mini Composter
- (5) Closure keys

OTHER MATERIALS:

- Stakes are not required, but can be used for additional stability of your composter. Long wooden stakes, plastic tent stakes, or landscaping staples are options. Stakes not included.

1

Plan the location of your GEOBIN® Mini Composter

- Place your GEOBIN® on level, well-drained ground that is exposed to some sunlight. While moisture and sun are good, too much of either is not.
- Ideal composting is found through a balanced level of moisture and the highest aeration possible. Your GEOBIN® composting system offers the highest passive aeration potential due to the numerous holes in the composter walls.

2

Open and size your GEOBIN® Mini Composter

- Open your GEOBIN® Mini Composter, lay it flat to break the curl, then expand it, making sure slots are aligned, to the desired diameter.
- As your needs grow, you can expand the width of your GEOBIN® Mini Composter.
- You may wish to maintain at least 7 inches of overlap on the GEOBIN® Mini Composter (i.e., do not use the first set of slots to complete the circle, but rather the second set for the largest recommended diameter).
- Always keep the excess material on the outside of the GEOBIN® Mini Composter so you don't catch the overlap material when you turn the compost.

3

Connect and secure your GEOBIN® Mini Composter

- With the GEOBIN® at your chosen diameter, insert GEOBIN® closure keys through the top-most, bottom-most and center overlapping slots.
- Install keys so that the larger key handle is on the outside of the GEOBIN® Mini Composter. This allows for easy access to unlock the key whenever you wish to adjust the size.
- Turn each key 90 degrees to lock it into place.
- Use the remaining keys to lock the remainder of the overlapping material. Insert one key through the top-most and one through the bottom-most slot.

4

Add compost material

- Cardboard, including the GEOBIN® Mini Composter box (shred first for best results)
- Kitchen scraps such as vegetables, egg shells, fruit peelings, and coffee grounds
- Garden and yard materials such as grass clippings, leaves, annual plants, and vegetables
- Wood ashes
- **DO NOT COMPOST:** Bones, meat scraps, branches, twigs, or dairy

MAINTENANCE

How to compost

- Alternate layers of organic waste, separating layers with ordinary non-glossy newsprint.
- Keep moist (not WET, but MOIST, like a squeezed-out sponge).
- Turn every four to six weeks for proper aeration.
- Add thin layers of soil to improve the process.

Compost is typically ready in about two months.
